

SWITCH HAVING INTEGRAL REMOTE ACTUATING DEVICE

ABSTRACT

A manually operable switch has an operating handle pivotally mounted on a
5 housing for moving a set of contacts in the housing from one position to another. A
force generating arrangement is mounted outside the switch housing, and a force
translation system extends between the housing and the force generating
arrangement. The force translation system has a first end structure movable into
and out of contact with the operating handle, and a second end structure disposed
10 for movement in the force generating arrangement.
